

# Perfect Writeup: Assignment 23 Exercise 7

Henry Yu

## Exercise 7

For fixed positive integer  $k$ , define the function

$$f_k(x) = \frac{\Gamma\left(\frac{k+1}{2}\right)}{\sqrt{k\pi}\Gamma\left(\frac{k}{2}\right)} \left(1 + \frac{x^2}{k}\right)^{-\left(\frac{k+1}{2}\right)} \text{ for all } x \in \mathbb{R}$$

Prove rigorously but concisely that  $\lim_{k \rightarrow \infty} f_k(x) = \frac{1}{\sqrt{2\pi}} e^{-x^2/2}$ .

---

To begin, we want to find the limit of  $f_k(x)$  as  $k \rightarrow \infty$ :

$$\lim_{k \rightarrow \infty} f_k(x) = \lim_{k \rightarrow \infty} \frac{\Gamma\left(\frac{k+1}{2}\right)}{\sqrt{k\pi}\Gamma\left(\frac{k}{2}\right)} \cdot \lim_{k \rightarrow \infty} \left(1 + \frac{x^2}{k}\right)^{-\frac{k+1}{2}}.$$

Solving for the left limit,

$$\begin{aligned} \lim_{k \rightarrow \infty} \frac{\Gamma\left(\frac{k+1}{2}\right)}{\sqrt{k\pi}\Gamma\left(\frac{k}{2}\right)} &= \frac{\left(\frac{k-1}{2e}\right)^{\frac{k-1}{2}} \sqrt{2\pi\left(\frac{k-1}{2}\right)}}{\left(\frac{k-2}{2e}\right)^{\frac{k-2}{2}} \sqrt{2k\pi^2\left(\frac{k-2}{2}\right)}} \\ &= \frac{\left(\frac{k-1}{2e}\right)^{\frac{k-1}{2}}}{\left(\frac{k-2}{2e}\right)^{\frac{k-2}{2}}} \cdot \sqrt{\frac{k-1}{k\pi(k-2)}} \\ &= \left(\frac{\frac{k-1}{2e}}{\frac{k-2}{2e}}\right)^{\frac{k-2}{2}} \cdot \sqrt{\frac{k-1}{2e}} \cdot \sqrt{\frac{k-1}{k\pi(k-2)}} \\ &= \left(\frac{k-1}{k-2}\right)^{\frac{k-2}{2}} \cdot \frac{k-1}{\sqrt{2ek\pi(k-2)}} \\ &= \left(\frac{k-1}{k-2}\right)^{\frac{k-2}{2}} \cdot \frac{\sqrt{k-2}}{\sqrt{2\pi}\sqrt{ek}} \\ &= \left[\sqrt{\left(1 + \frac{1}{k-2}\right)^{k-2}} \cdot 1 + \frac{1}{k-2}\right] \cdot \frac{\sqrt{k-2}}{\sqrt{2\pi}\sqrt{ek}} \\ &= \sqrt{e} \cdot \frac{1}{\sqrt{2\pi}\sqrt{e}} \\ &= \frac{1}{\sqrt{2\pi}}. \end{aligned}$$

The right limit of the function looks similar to a definition of  $e^x$ :

$$\lim_{n \rightarrow \infty} \left(1 + \frac{x}{n}\right)^n.$$

$$\lim_{k \rightarrow \infty} \left(1 + \frac{x^2}{k}\right)^{-\frac{k+1}{2}} = e^{-\frac{x^2}{2}}.$$

Combining the values of the left and right limits,

$$f_k(x) = \frac{1}{\sqrt{2\pi}} e^{-\frac{x^2}{2}}.$$
